BRITISH NATIONAL FORMULARY BNF

THE TOP 100 DRUGS

CLINICAL PHARMACOLOGY AND PRACTICAL PRESCRIBING

Elsevier Health Sciences Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.

BRITISH NATIONAL FORMULARY (BNF) 69

The British National Formulary (BNF) provides up-to-date, practical guidance on prescribing, dispensing, and administering medicines. This essential reference reflects current best practice as well as legal and professional guidelines relating to the uses of medicines.
