The Logic of Science in Sociology

Routledge The subject of this book is limited to the abstract form or "logic" of science, as applied particularly to scientific sociology. But the discussion presented here goes beyond abstraction and serves a practical role in the sociology and history of science by providing a framework for reducing the enormous variety of scientific researches-both within a given field and across all fields-to a limited number of interrelated formal elements. Such a framework may prove useful in assessing empirical relationships between the formal aspects of scientific work and its substantive social, economic, political, and historical aspects. This is a work of synthesis that merits close attention. It provides an area for viewing theory as something more than a review of the history of any single social science discipline.

Life!

Reflections on Your Journey

[ReadHowYouWant.com](#) *In LIFE! Reflections on Your Journey, Louise L. Hay brings you a truly moving and inspirational book that will help you identify and heal a number of the pressing issues that you encounter on your path. The Crystallization of the Arab State System, 1945-1954

[Syracuse University Press](#) *This volume contains a comprehensive examination of the crucial first ten years of the Arab League and of the continuing dilemma it faces in juggling opposing local and regional interests.*

Ford AOD Transmissions

Rebuilding and Modifying the AOD, AODE and 4R70W

[CarTech Inc](#) *While millions of Ford rear-wheel-drive cars are equipped with the durable and simple C4 and C6 transmissions of the 1960s, early in the 1980s Ford replaced those old designs with the AOD transmission for a new generation of cars. Overdrive gears, once popular before WWII, were now becoming popular again, as manufacturers were under increasing pressure to raise fuel economy to meet ever more demanding EPA standards. A nice byproduct of that was more comfortable cruising speeds, where your engine didn't have to work so hard in addition to getting better fuel economy. In Ford AOD Transmissions: Rebuilding and Modifying the AOD, AODE and 4R70W, author George Reid walks you through the process step-by-step, from removing the transmission from the vehicle, to complete disassembly and cleaning, to careful reassembly, to proper re-installation and road testing. Performance modifications are also covered, as well as an ID guide for various model numbers, evolutionary design changes, shift kit installation, and torque converter selection. This book is ideal for people who already have one of these transmissions in their car, as well as enthusiasts who would like to swap one of these more modern units into an older chassis to get all the benefits of overdrive. If you plan on researching or working on any one of these overdrive models, this book is a vital addition to your workbench or library.*

From Animals to Animats 3

Proceedings of the Third International Conference on Simulation of Adaptive Behavior

MIT Press August 8-12, 1994, Brighton, England *From Animals to Animats 3* brings together research intended to advance the front tier of an exciting new approach to understanding intelligence. The contributors represent a broad range of interests from artificial intelligence and robotics to ethology and the neurosciences. Unifying these approaches is the notion of "animat" -- an artificial animal, either simulated by a computer or embodied in a robot, which must survive and adapt in progressively more challenging

environments. The 58 contributions focus particularly on well-defined models, computer simulations, and built robots in order to help characterize and compare various principles and architectures capable of inducing adaptive behavior in real or artificial animals. Topics include: - Individual and collective behavior. - Neural correlates of behavior. - Perception and motor control. - Motivation and emotion. - Action selection and behavioral sequences. - Ontogeny, learning, and evolution. - Internal world models and cognitive processes. - Applied adaptive behavior. - Autonomous robots. - Hierarchical and parallel organizations. - Emergent structures and behaviors. - Problem solving and planning. - Goal-directed behavior. - Neural networks and evolutionary computation. - Characterization of environments.
