Berrett-Koehler Publishers "This book reminds us of what we have in common: the power to create a good life for ourselves and for others, no matter what the world has in store for us." —Michael J. Fox This book reveals that people with disabilities are the invisible force that has shaped history. They have been instrumental in the growth of freedom and birth of democracy. They have produced heavenly music and exquisite works of art. They have unveiled the scientific secrets of the universe. They are among our most popular comedians, poets, and storytellers. And at 1.2 billion, they are also the largest minority group in the world. Al Etmanski offers ten lessons we can all learn from people with disabilities, illustrated with short, funny, inspiring, and thought-provoking stories of one hundred individuals from twenty countries. Some are familiar, like Michael J. Fox, Greta Thunberg, Stephen Hawking, Helen Keller, Stevie Wonder, and Temple Grandin. Others deserve to be, like Evelyn Glennie, a virtuoso percussionist who is deaf—her mission is to teach the world to listen to improve communication and social cohesion. Or Aaron Philip, who has revolutionized the runway as the first disabled, trans woman of color to become a professional model. The time has come to recognize people with disabilities for who they really are: authoritative sources on creativity, love, sexuality, resistance, dealing with adversity, and living a good life.

## **WHAT DOESN'T KILL YOU**

---

### **A LIFE WITH CHRONIC ILLNESS - LESSONS FROM A BODY IN REVOLT**

---

Henry Holt and Company "Should be read by anyone with a body. . . . Relentlessly researched and undeniably smart." —The New York Times Named one of BuzzFeed's "Best Books of 2021" What Doesn't Kill You is the riveting account of a young journalist's awakening to chronic illness, weaving together personal story and reporting to shed light on living with an ailment forever. Tessa Miller was an ambitious twentysomething writer in New York City when, on a random fall day, her stomach began to seize up. At first, she toughed it out through searing pain, taking sick days from work, unable to leave the bathroom or her bed. But when it became undeniable that something was seriously wrong, Miller gave in to family pressure and went to the hospital—beginning a years-long nightmare of procedures, misdiagnoses, and life-threatening infections. Once she was finally correctly diagnosed with Crohn's disease, Miller faced another battle: accepting that she will never get better. Today, an astonishing three in five adults in the United States suffer from a chronic disease—a percentage expected to rise post-Covid. Whether the illness is arthritis, asthma, Crohn's, diabetes, endometriosis, multiple sclerosis, ulcerative colitis, or any other incurable illness, and whether the sufferer is a colleague, a loved one, or you, these diseases have an impact on just about every one of us. Yet there remains an air of shame and isolation about the topic of chronic sickness. Millions must endure these disorders not only physically but also emotionally, balancing the stress of relationships and work amid the ever-present threat of health complications. Miller segues seamlessly from her dramatic personal experiences into a frank look at the cultural realities (medical, occupational, social) inherent in receiving a lifetime diagnosis. She offers hard-earned wisdom, solidarity, and an ultimately surprising promise of joy for those trying to make sense of it all.

## **WORLD ATLAS OF EPIDEMIC DISEASES**

---

CRC Press The euphoria about the defeat of epidemics which surrounded the global eradication of smallpox in the 1970s proved short-lived. The advent of AIDS in the following decade, the widening spectrum of other newly-emergent diseases (from Ebola to Hanta virus), and the resurgence of old diseases such as tuberculosis and malaria all suggest that the threat of epidemic diseases remains at an historic high. The World Atlas of Epidemic Diseases provides a timely and scholarly review of over fifty of the most important such diseases at the start of the twenty-first century. This stunningly presented collection of maps, illustrations and commentary offers an authoritative overview of the global distribution of major epidemic diseases on a variety of spatial scales from the local to the global. The Atlas is arranged in an historical sequence, beginning with classic plagues such as the 'Black Death' and cholera and moving on through smallpox and measles to 'modern' diseases such as AIDS and Legionnaires' disease. Over 400 figures are incorporated, including 150 specially drawn maps supported by micrographs of the causative agents, photographs of the disease vectors, historical prints and graphs of changing incidence. The text for each disease includes discussion of its nature and epidemiological features, its origin (where known) and historical impacts, and its global status at the start of the twenty-first century. The book concludes with an informed look towards the future, assessing the probable impacts of major medical advances on life expectancy and the chances of success of programmes for the global eradication of diseases such as polio and measles. The World Atlas of Epidemic Diseases makes a major new contribution to our knowledge of the global burden of disease and is an informative and fascinating reference on the changing distributions of disease. It will be an invaluable resource for anyone interested in the spread, control and eradication of epidemic disease.

### **PHILOSOPHICAL DIMENSIONS**

---

Oxford University Press, USA "In this volume, a group of leading philosophers, economists, epidemiologists, and policy scholars continue a twenty-year discussion of philosophical questions connected to the Global Burden of Disease Study (GBD), one of the largest-scale research collaborations in global health. Chapters explore issues in ethics, political philosophy, metaphysics, the philosophy of economics, and the philosophy of medicine. Some chapters identify previously-unappreciated aspects of the GBD, including the way it handles causation and aggregates complex data; while others offer fresh perspectives on frequently-discussed topics such as discounting, age-weighting, and the valuation of health states. The volume concludes with a set of chapters discussing how epidemiological data should and shouldn't be used"--

## **SOLDIERING IN THE ARMY OF NORTHERN VIRGINIA**

---

### **A STATISTICAL PORTRAIT OF THE TROOPS WHO SERVED UNDER ROBERT E. LEE**

---

UNC Press Books In this sophisticated quantitative study, Joseph T. Glatthaar provides a comprehensive narrative and statistical analysis of many key aspects of General Robert E. Lee's Army of Northern Virginia. Serving as a companion to Glatthaar's General Lee's Army: From Victory to Collapse, this book presents Glatthaar's supporting data and major conclusions in extensive and extraordinary detail. While gathering research materials for General Lee's Army, Glatthaar compiled quantitative data on the background and service of 600 randomly selected soldiers--150 artillerymen, 150 cavalrymen, and 300 infantrymen--affording him fascinating insight into the prewar and wartime experience of Lee's troops. Soldiering in the Army of Northern Virginia presents the full details of this fresh, important primary research in a way that is useful to scholars and students and appeals to anyone with a serious interest in the Civil War. While confirming much of what is believed about the army, Glatthaar's evidence challenges some conventional thinking in significant ways, such as showing that nearly half of all Lee's soldiers lived in slaveholding households (a number higher than previously thought), and provides a broader and fuller portrait of the men who served under General Lee.

## **INTERNATIONAL DISABILITY STUDIES**

---

### **ILLNESS BEHAVIOR**

---

#### **A MULTIDISCIPLINARY MODEL**

---

Springer Science & Business Media In August, 1985, the 2nd International Conference on Illness Behaviour was held in Toronto, Ontario, Canada. The first International Conference took place one year previous in Adelaide, South Australia, Australia. This book is based on the proceedings of the second conference. The purpose behind this conference was to facilitate the development of a single integrated model to account for illness experience and presentation. A major focus of the conference was to outline methodological issues related to current behaviour research. A multidisciplinary approach was emphasized because of the bias that collaborative efforts are likely to be the most successful in achieving greater understanding of illness behaviour. Significant advances in our knowledge are occurring in all areas of the biological and social sciences, albeit more slowly in the latter areas. Marked specialization in each of these areas has led to greater difficulty in integrating new knowledge with that of other areas and the development of a meaningful cohesive model to which all can relate. Thus there is a major need for forums such as that provided by this conference.

### **GLOBAL BURDEN OF DISEASE AND RISK FACTORS**

---

World Bank Publications Strategic health planning, the cornerstone of initiatives designed to achieve health improvement goals around the world, requires an understanding of the comparative burden of diseases and injuries, their corresponding risk factors and the likely effects of intervention options. The Global Burden of Disease framework, originally published in 1990, has been widely adopted as the preferred method for health accounting and has become the standard to guide the setting of health research priorities. This publication sets out an updated assessment of the situation, with an analysis of trends observed since 1990 and a chapter on the sensitivity of GBD estimates to various sources of uncertainty in methods and data.

### **DISABILITY IN THE GLOBAL SOUTH**

---

---

### **THE CRITICAL HANDBOOK**

---

Springer This first-of-its kind volume spans the breadth of disability research and practice specifically focusing on the global South. Established and emerging scholars alongside advocates adopt a critical and interdisciplinary stance to probe, challenge and shift common held social understandings of disability in established discourses, epistemologies and practices, including those in prominent areas such as global health, disability studies and international development. Motivated by decolonizing approaches, contributors carefully weave the lived and embodied experiences of disabled people, families and communities through contextual, cultural, spatial, racial, economic, identity and geopolitical complexities and heterogeneities. Dispatches from Ghana, Lebanon, Sri Lanka, Cambodia, Venezuela among many others spotlight the complex uncertainties of modern geopolitics of coloniality; emergent forms of governance including neoliberal globalization, war and conflicts; the interstices of gender, race, ethnicity, space and religion; structural barriers to redistribution and realization of rights; and processes of disability representation. This handbook examines in rigorous depth, established practices and discourses in disability including those on development, rights, policies and practices, opening a space for critical debate on hegemonic and often unquestioned terrains. Highlights of the coverage include: Critical issues in conceptualizing disability across cultures, time and space The challenges of disability models, metrics and statistics Disability, poverty and livelihoods in urban and rural contexts Disability interstices with migration, race, ethnicity, gender and sexuality Disability, religion and customary societies and practice · The UNCRPD, disability rights orientations and instrumentalities · Redistributive systems including budgeting, cash transfer systems and programming. · Global South-North partnerships: intercultural methodologies

in disability research. This much awaited handbook provides students, academics, practitioners and policymakers with an authoritative framework for critical thinking and debate about disability, while pushing theoretical and practical frontiers in unprecedented ways.
