MATERNITY, NEWBORN, AND WOMEN'S HEALTH NURSING

A CASE-BASED APPROACH

"**Publisher's Note: Maternity, Newborn, and Women's Health** is a comprehensive textbook for nursing students. The text is case-based with fictional characters drawn from experience playing both continuous and recurring roles. Case-based learning provides students with an explanatory context, helping them to retain information, encouraging them to think critically, and allowing them to apply what they are learning to clinical practice. The first unit, Scenarios for Clinical Preparation, is devoted to preconception-to-postpartum care of individuals with common pregnancy-related pathologies and sequelae. These chapters provide comprehensive scenarios for the entirety of these pregnancies, integrating normal progressions as well as common associated complications. The purpose of this unit is to provide early frontloading of content to prepare students for clinical. All chapters in the second unit, Kellie Bettencourt: The Uncomplicated Patient, pertain to one case. The remaining two units--Unit III:High-Risk Conditions and Complications, and Unit IV, Women's Health--provide comprehensive, traditionally organized content that integrates the patients of the first and second unit as recurrent characters in order to reinforce earlier study. When students read Unit III, the recurrent character from Unit I and Unit 2 will provide familiar content and aid in comprehension. As with clinical, it is the participation in many similar situations that facilitates learning, not just a single exposure to a patient. The book will take care to value context when making the new presentation of older information in order for it to be reinforcing and stimulating instead of just repetitive. With a goal of approaching the information in multiple ways, many innovative features are included to introduce a different perspective on the topic. For example, "Pop Quiz" analyzes commonly occurring plot points seen in popular media for accuracy; "Analyze the Evidence" provides accessible comparisons of contradictory research and practice; and "Step-by-Step Skills" provides the task-based information critical to nursing success and student confidence. All features are designed to be accessible, narratively compelling, conducive to curiosity and critical thinking, and to emphasize in-depth learning"--Provided by publisher.

REPRODUCTIVE, MATERNAL, NEWBORN, AND CHILD HEALTH

World Bank Publications The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

BIRTH SETTINGS IN AMERICA

OUTCOMES, QUALITY, ACCESS, AND CHOICE

National Academies Press The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings.
