## A Handbook for the Assessment of Children's Behaviours, Includes Wiley Desktop Edition

*John Wiley & Sons* Handbook for the Assessment of Children's Behaviours with Wiley Desktop Edition This ground-breaking book takes a new approach to the assessment of behaviour in children and adolescents. Written by an expert author team, combining one (Jonathan Williams) with higher qualifications in general practice, child neuropsychiatry, and child and adolescent psychiatry, with one (Peter Hill) with higher qualifications in medicine, paediatrics and child and adolescent psychiatry, the book draws on many thousands of multidisciplinary case discussions, at Great Ormond Street Hospital, in the Children's Multispecialty Assessment Clinic in North London, and in private practice. The book is ideal for the busy mental health professional working in a small team. Organised to allow rapid look-up of behaviours with comprehensive lists of their possible causes, it synthesizes research evidence and clinical experience. The authors interpret behaviour broadly, including not just voluntary actions, but also actions whose voluntary nature is questionable (such as drop attacks, personal preferences, and pseudobehaviours). They also include problems that lead to referral through their behavioural manifestations (e.g. aggression, anxiety, or a poor relationship with mother). Overall, the book spans the behavioural, cognitive, social and emotional problems of children and adolescents. With the child and family in the room, and with detailed school reports and psychometric results available, it is usually possible to identify causes of symptoms that are specific to the child and his environment, and which can guide behavioural, cognitive, social, and family interventions. Purchasers of the book will also be entitled to a Wiley Desktop Edition—an interactive digital version featuring downloadable text and images, highlighting and note taking facilities, in-text searching, and linking to references and glossary terms.

## Handbook of Neurological Rehabilitation

*Psychology Press* Changes in the focus of neurological practice worldwide have led to the need for new standard texts that reflect the current state of this expanding area of clinical expertise. The second edition of the Handbook of Neurological Rehabilitation is a major reference source that fulfils this need, providing an invaluable resource for all professions that work with patients suffering from neurological disorders. It brings restorative neurology to the bedside and shows how a reiterative, goal-oriented, problem-solving training programme can benefit patients, sometimes on a scale not achieved by pharmacological or surgical interventions. The book is divided into three sections all of which have been updated. Section One explores the clinical and biological principles underpinning rehabilitation practice in the context of neurological disablement. Section Two describes the assessment, treatment, and management of the major physical, cognitive and behavioural impairments, and the resulting functional deficits that may follow or accompany neurological disease. The final section explores in more detail these problems and their management in relation to the more common specific disorders of the nervous system. The text emphasises the fact that rehabilitation is an ongoing process involving multidisciplinary problem-solving, goal-setting and education; in which organised care is more effective than unorganised care; and the breakdown of professional barriers within rehabilitation, to facilitate the use of combined treatment techniques, improves outcome. It describes the contribution made by neural reorganisation and compensatory mechanisms to recovery of function, focuses on the avoidance of secondary deficit, and explores the physical, cognitive, affective and behavioural problems that may occur after neurological damage. At a time when new medical technologies threaten to fragment the integrity of medical care at individual and societal levels, it is crucial that all those involved in the management of chronic neurological disease have a working knowledge of the contents of this book. Their perspective on clinical practice will then be truly integrated and holistic and their patients will benefit accordingly.
