### ANIMAL PRODUCTION AND NATURAL RESOURCES UTILISATION IN THE MEDITERRANEAN MOUNTAIN AREAS

---

**Wageningen Academic Publishers** *Mediterranean inhabitants depend on natural resources for their livelihoods. Livestock production and forestry are key sources of income yet are carried out under harsh conditions such as limited land resources, marginal agricultural conditions, isolation, and scant equipment and infrastructure. Livestock is of particular importance in mountain production systems as they convert plant biomass into useful products for humans such as milk, meat and draught power. These products are key to the regions' sustainability. The main topics discussed in this book are: Human geography of Mediterranean mountain territories. Livestock production and natural resources. Improving the efficiency of livestock systems in Mediterranean mountain areas. Applications of new technologies for environmentally sound management of livestock and natural resources. The role livestock plays in rural development and in safeguarding natural resources.*

**IONIC LIQUIDS: PROPERTIES AND APPLICATIONS**

---

**Frontiers Media SA Sustainability**, defined as the way to meet the needs of the present generation without compromising the ability of future ones to meet their own, is one of the main challenges of modern society. Within this context, chemistry plays a significant role, and solvent nature as well as its environmental impact are pivotal issues frequently addressed. Ionic liquids, i.e. organic salts that have melting temperatures lower than 100 °C, have been frequently hailed as alternatives to conventional organic solvents. Their greenness has been mainly ascribed to their low vapor pressure and flammability. However, in addition to this, their high solubilizing ability and low miscibility with conventional organic solvents frequently allow for reducing the amount used, as well as for their recycling. Ionic liquids, especially the ones featured by aromatic cations, are frequently described as “polymeric supramolecular fluids” constructed through the establishment of feeble but cooperative supramolecular interactions like Coulomb and  $\pi$ - $\pi$  interactions, as well as hydrogen bonds. In general, ionic liquids are also indicated as “designer solvents” as it is possible to tailor their features to specific applications by simply modifying their cation or anion structure. In this way, small changes in the ion’s structure can give rise to solvents showing very different properties. The above premises widely justify the growing interest in the properties and applications of ionic liquids, seen in recent literature (according to Scopus, more than 27,000 papers published in the last five years have “ionic liquids” as a keyword). Thanks to their properties, they have been variously used as solvent media, solvents for the obtainment of gel phases, components in the building of dye-sensitized solar cells, media for the preparation of thermochromic materials, etc. This Research Topic aims to present how structural features can determine not only the properties of ionic liquids, but also their possible employment. In this latter case, the interest arises from their ability to affect the outcome of a given reaction in terms of rate, yield, and nature of the products obtained for general use in the field of materials chemistry. This article collection is dedicated to Prof. Kenneth R. Seddon for his outstanding contribution to the formation and development of the ionic liquids community.

**ENVIRONMENTALLY FRIENDLY (BIO)TECHNOLOGIES FOR THE REMOVAL OF EMERGING ORGANIC AND INORGANIC POLLUTANTS FROM WATER**

---

**IWA Publishing** This book highlights the impacts of emerging pollutants (both organic and inorganic) in water bodies and the role and performances of different water and wastewater treatment approaches that are presently being employed in the field of environmental engineering. Some of these approaches are focused on ‘end-of-pipe’ treatment, while most of these approaches are focused on the application of novel physic-chemical and biological techniques for wastewater treatment and reuse. The goal of this book is to present the emerging technologies and trends in the field of water and wastewater treatment. The papers in this book provide clear proof that environmentally friendly (bio)technologies are becoming more and more important and playing a critical role in removing a wide variety of organic and inorganic pollutants from water. In Focus - a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.
