OREGON STATE SYSTEM OF HIGHER EDUCATION BULLETIN

PEDAGOGIC RESEARCH IN GEOGRAPHY HIGHER EDUCATION

Routledge *There are many books about teaching in Geography, but this is the first dealing specifically with Pedagogic Research, its methods and practices. Pedagogy research concerns the processes of learning and the development of learners. It is a learner-centred activity that aims to evaluate and improve the ways that students learn and learn to manage, control and comprehend their own learning processes, first as Geographers in Higher Education but equally as future educated citizens. This book collects together some key research papers from the Journal of Geography in Higher Education. They concern original research and critical perspectives on how Geographers learn, critical evaluations of both new and traditional frameworks and methods used for Pedagogic research in Geography, and some case studies on the promotion of self-authorship, learner autonomy, in key Geography Higher Education contexts such as fieldwork and undergraduate project work. This book is a compilation of articles from various issues of the Journal of Geography in Higher Education.*

YOUNG CITIZENS OF THE WORLD

TEACHING ELEMENTARY SOCIAL STUDIES THROUGH CIVIC ENGAGEMENT

Routledge *This text takes a clear stance: Social studies is about citizenship education - citizenship not only as a noun, but as a verb, something one DOES. Based on this clear curricular and pedagogical purpose, it lays out a holistic and multicultural three-part process for civic preparation: becoming informed, thinking it through, and taking action. Six outstanding teaching strategies and teaching/learning projects throughout bring this framework life.*

EDUCATION ABROAD

LEARNING ENVIRONMENTS IN A GLOBAL CONTEXT

IAP *Education abroad is an essential part of the university student experience. Initiatives such as IIE's Generation Study Abroad encourage more U.S. undergraduate and graduate students to study abroad. According to the Open Doors 2019 Report by the Institute for International Education (IIE), 341,751 students participated in post-secondary education abroad programs during the 2017/2018 academic year. This figure represents an increase of 2.7% of U.S. students studying abroad from the previous year. Research shows that education abroad provides students with opportunities not only to see the world but also to develop intercultural competence, which is increasingly crucial in the 21st century workplace. There are also numerous studies that show gains in autonomy, confidence, and tolerance for ambiguity in students who complete some type of study abroad experience. In sum, the education abroad experience in itself represents a powerful learning environment that continues to support personal and professional development long after returning home. Nonetheless, these learning environments must be cultivated along with faculty who develop and lead programs, as well as university partners and providers. Furthermore, education abroad programming and assessment is complex and must take into consideration many factors including academic goals, purposeful curricular development, and a balance between academics and leisure activities on site. This book explores the many aspects of education abroad as a learning environment, such as student learning outcomes, faculty development, and program assessment and evaluation. In addition, several chapters present education abroad experiences as a model for community engagement and activism. The authors represent a diverse range of institutions and perspectives and discuss programs around the globe. The book represents the voices of faculty that lead education abroad programs, students who participate in them, and also those of international students on a U.S. campus reflecting on their personal experiences abroad. Furthermore, this book contributes to the discussion of best practices to assist faculty and program directors in creating robust education abroad programs that meet the needs of their students and institutions.*

BRIDGING THE GAP

COLLEGE READING

Addison Wesley Publishing Company *Bridging the Gap* has been fully revised to include Collaborative Critical Thinking boxes and Learning Logs, two critical thinking components new to this fifth edition. Along with these elements - which have been so successful in *Breaking Through*, the lower-level companion text to *Bridging the Gap* - all other features have been strengthened to further enhance this best-selling reading text. Widely praised for her engaging and motivating writing style, author Brenda D. Smith introduces three reading levels to students - in ascending order of difficulty - that are designed to encourage critical thinking. The fifth edition showcases expanded summary writing discussions, additional practice exercises, and new passages that model the various patterns of organization. Over 60 percent of the end-of-chapter selections were replaced, and all chapters now contain at least one new longer selection. Many academic disciplines are represented throughout, including psychology, history, business, allied health, sociology, English literature, and more.

EXPLODING THE CASTLE

RETHINKING HOW VIDEO GAMES & GAME MECHANICS CAN SHAPE THE FUTURE OF EDUCATION

IAP *Lacking a digital crystal ball, we cannot predict the future of education or the precise instructional role games will have going forward. Yet we can safely say that games will play some role in the future of K-12 and higher education, and members of the games community will have to choose between being passive observers or active, progressive contributors to the complex and often political process of weaving together pedagogy, technology, and culture. This will involve agreeing that games—or, more specifically, game mechanics and the engagement in joyful learning that they engender—are not only critical for shaping online and classroom instruction but also the evolution of schooling as a whole. Likewise, it will involve a hard push beyond questions like “Are video games ‘good’ or ‘bad’ for education?” and “Are games ‘better’ for all students than traditional face-to-face teaching” to unpack how game experiences vary with individual learner goals as an interaction with the parameters of an educational environment. Simply put, we need to form a cohesive, compelling argument in support of the notion that games are entire learning ecologies in and of themselves. This edited volume is designed to anchor collective thinking with respect to the value-added nature of games for learning and the complexities involved in player experience, narrative context, and environmental?player interactions. As could be expected, we are not interested in debates about “gamification,” game violence, individual game quality, and other topics that have become standard fare in extant games literature. Instead, we seek to emphasize issues of scalability, the induction of player goal adoption, affordances of game-based instructional environments, relationships between play and transfer, and the value of games as part of an ecopsychological worldview. As long-time contributors in a field that has made a habit of playing it safe—pun intended—we seek to bring the dialogue in a more nuanced and meaningful direction that will reach teachers, researchers, designers, and players alike.*
